

More flexibility is not possible! Realize a variety of applications in your company with only one intelligent and compact solution. Digital Signage has never been easier - STiNO PromoBox!

PromoBox is the ultra-compact and powerful plug & play solution that is ready to go in a few minutes. Connect power and display – off you go without any software installation and without a local network. Present your content such as videos¹), images, logos, text tickers on up to 3x 4k displays or as a video wall¹).

PromoBox presents your content (e.g. images, videos¹), logos, text tickers, etc.) in a few minutes thanks to ready-made playlist templates. With the help of the WYSIWYG editor, templates can be edited or newly created as required. The editor can either be operated from anywhere using the local browser or a local network.

PromoBox due to its small dimensions (190 x 149 x 26 mm) only requires minimal space and can be used anywhere in the robust metal housing.

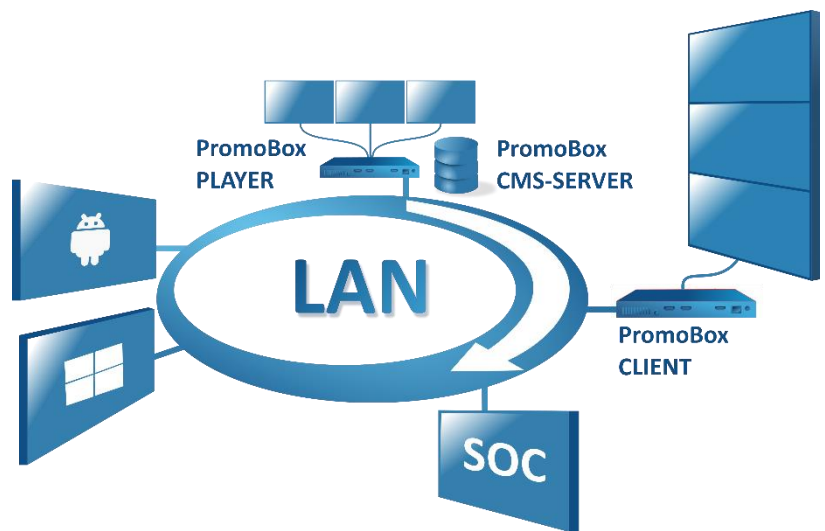

Corona-Special Deal

895,- EUR
plus VAT

As Stand-Alone Player/Server Appliance with up to 3x HDMI 4k-Screens separately or configured as a video wall¹⁾.

As Netzwerk-Server/Player with up to 3x HDMI 4k-Screens separately or configured as a video wall¹⁾ controlling further player (Windows, Android, SoC Tizen Samsung, SoC WebOS LG) in your LAN (requires additional player licenses)

As Player with up to 3x HDMI 4k-Screens separately or configured as a video wall¹⁾ controlled by cloud service incl. 12-month iChannel-Cloud-subscription

Examples...

Welcome Screen

Manage splash screens e.g. in the entrance area and welcome your guests with tailor-made content, personal address and image-enhancing content. There is no second chance for a first impression!

Employee Information

With the PromoBox you keep your employees up to date. By integrating PDFs, text, images and videos, you can inform your employees precisely. Through interactivity, your employees can also query content based on personal relevance.

Video Wall

Several screens can function together as a video wall¹⁾ and display content on the entire surface as on an oversized monitor – portrait or vertical arrangements are possible without any problems. But you can also distribute different content separately on the individual screens

Canteen Area

Realize menu boards with the PromoBox, as they are mostly known from system catering. A connection to our menu management application is also possible at any time with the PromoBox.

**additional accessories and / or licenses may be needed*

Wayfinding

In larger buildings, the wayfinding system helps your visitors and employees to orientate themselves and to avoid unnecessary wrong turns.

Interactive Touch System

If the connected monitors are touch-enabled, you can easily add buttons to your presentations using the WYSIWYG drag & drop editor. It is also possible to integrate websites and release them for operation using touch.

Door Signage

Organize the occupancy of your rooms from any PC in the intranet in connection with Google Calendar or MS Exchange. In addition, LED status displays (e.g. red = occupied, green = free) can be activated on the door signage – provided the display* is equipped with LEDs.

Access Control

Access control and information for visitors is an important topic, especially in times of Corona. The PromoBox has the appropriate functions to manage access to your company.

**additional accessories and / or licenses may be needed*

Trigger Control

PromoBox can be controlled via various triggers* such as RFID, range finders, buttons, magnets, light barriers, vibrations, etc.

Production Data Visualization

By integrating XML, it is also possible to transfer data from your existing databases to the PromoBox. Existing data can thus be used for the visualization.

Interactive Command Control

Control other devices* by using touchscreen buttons to send cmd-commands. Send commands to other devices via RS-232 interfaces.

**additional accessories and / or licenses may be needed*

PromoBox consists of hardware and software that are preinstalled as Plug & Play solution includes the following components:

Hardware

- An ultra-compact and robust signage player in a metal housing with Windows 10 IoT
